

Shared Control Planes

Creating a Unified Enterprise Platform for Database Management

Role: Lead UX Designer

Responsibilities: UX Strategy, Research, Experience Architecture, Interaction Design, Usability Testing, Executive Alignment

HERO IMAGE PLACEHOLDER

Reserve a full-width hero image showing the final Shared Control Planes dashboard or ecosystem.

Executive Summary

JPMorgan Chase's database ecosystem consisted of independently developed control planes across relational and non-relational database technologies. Engineers were often forced to use three or more separate systems to provision services, monitor health, review operational metrics, and access documentation. The Shared Control Planes initiative established a unified experience framework that reduced operational fragmentation through shared workflows, navigation, and reusable UX patterns.

IMAGE PLACEHOLDER

Insert ecosystem diagram / vision slide.

The Business Challenge

Operational workflows were fragmented across multiple products. Similar tasks behaved differently depending on the database technology. This increased cognitive load, onboarding effort, and operational inefficiency.

IMAGE PLACEHOLDER

Insert 'Current State' journey showing 3+ systems.

Strategic Goals

1. Reduce operational fragmentation by consolidating common workflows into one platform.
2. Create a shared control plane supporting both relational and non-relational database products.
3. Standardize navigation, terminology, and interaction patterns.
4. Improve operational visibility through centralized dashboards.
5. Build reusable UX patterns for future database products.

Discovery

Audited 9 control planes, interviewed 11 product teams, mapped workflows, inventoried features, identified pain points, and synthesized recurring patterns across products.

IMAGE PLACEHOLDER

Insert research Miro board, ecosystem map, personas, journey maps.

Research Insights

Users prioritized operational awareness over aesthetics, expected consistent workflows across database products, relied on search more than navigation, and frequently left the product to find documentation. Two personas emerged: users seeking speed and experts requiring deeper operational visibility.

IMAGE PLACEHOLDER

Insert affinity map, personas, insight slides.

Experience Strategy

Defined principles of consistency, efficiency, discoverability, contextual guidance, and scalability. Proposed shared interaction patterns, embedded help, progressive disclosure, and common information architecture.

IMAGE PLACEHOLDER

Insert design principles, content ramp, interaction framework.

Design Solution

Created shared homepage, service discovery, service detail, operational dashboards, health monitoring, search, embedded documentation, and reusable patterns applicable across relational and non-relational control planes.

IMAGE PLACEHOLDER

Reserve 2–3 full-page mockups of final designs.

Usability Testing

Conducted moderated usability testing with 13 enterprise users across multiple roles. Participants completed task-based scenarios using interactive prototypes. Measured task completion, CES, CSAT, UMUX-Lite, and qualitative feedback.

IMAGE PLACEHOLDER

Insert usability methodology and participant slides.

Results

92% Task Completion
92 CES

95 CSAT

95 UMUX-Lite

85% preferred the redesigned homepage. Users highlighted reduced context switching, improved operational visibility, better search, and consistent workflows.

IMAGE PLACEHOLDER

Insert results charts and participant quotes.

Impact

The initiative established a scalable Shared Control Plane supporting relational and non-relational database products, reducing operational fragmentation and creating a unified UX foundation through shared navigation, standardized workflows, reusable components, and consistent information architecture.

Reflection

This project shifted my role from designing interfaces to defining enterprise platform strategy. By grounding decisions in research and validating them through usability testing, I helped establish a scalable experience framework capable of evolving with JPMorgan Chase's growing database ecosystem.
